Triodos Euro Bond Impact Fund aims to generate positive impact and stable income from a concentrated portfolio of investment-grade, euro-denominated bonds issued by listed companies, and semi-public institutions and EU member state governments.

We select companies for their contribution to our seven sustainable transition themes. Through integrated financial and sustainability analysis we identify the drivers of a company's long-term value creation and assess the impact of ESG materiality on these drivers. Additionally, the companies we invest in must comply with the Triodos strict minimum standards. This product is not without risks. Please see the prospectus and the KID for more detail.

Highlights

- Triodos Euro Bond Impact Fund generated a return (after costs) of -1.73%, while the benchmark yielded -1.48%.
- Bond yields reached new highs in February on the back of persistently high inflation and stronger than expected macro-economic data. Yield curves bear flattened, as central bank officials remained hawkish in their comments and markets expect them to continue monetary tightening for longer. Spreads on periphery sovereign bonds were stable. Corporate bonds outperformed sovereign bonds, resulting from shorter duration and broadly unchanged risk spreads.
- The fund had a negative performance, lagging its reference index over the month. The performance difference stems from the longer duration of the fund, which resulted in a negative curve change effect. The allocation effect was positive because of our underweight position in sovereign bonds and overweight position in government-related bonds. This compensated for the negative selection effect stemming from our defensive positioning in terms of credit risk.
