

Key investor information.

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Triodos Energy Transition Europe Fund, a sub-fund of Triodos Impact Strategies II NV.

Class Z2-CAP - ISIN NL0013908700.

This fund is an open-ended investment company with variable capital and is managed by Triodos Investment Management BV.

Objectives and investment policy.

Investment objective

Triodos Energy Transition Europe Fund mainly invests in small- and medium-sized renewable energy producing project companies in Europe. The fund aims to generate stable long-term capital growth for its investors.

Investment policy

The most important sectors in which the fund invests, are wind, solar and river hydro. The countries in which it invests are mainly the Netherlands, Belgium, Germany, Spain, France, the United Kingdom and the Scandinavian countries. The fund may also invest, a limited amount of its net assets outside of Europe. The fund invests in equity

and/or quasi-equity, such as shareholder loans and preferred capital, and in subordinated debt, in Euro. Triodos Energy Transition Europe Fund may borrow up to 20% of its net assets. The sustainable energy sector does not lend itself to short term capital growth. The equity and subordinated loan investments are long term.

Other information

- Triodos Energy Transition Europe Fund does not distribute dividends: results are re-invested.
 - Subscription and redemption frequency is weekly.
 - Portfolio transaction costs are paid out of the fund's assets.
 - Triodos Energy Transition Europe Fund's recommended holding period is five years.
-

Risk and reward profile.

The risk and reward indicator is based on the volatility of the fund. Historical data may not be a reliable indicator of the future risk profile of the fund. The historical data, as used in this indicator, are of a comparable share class of Triodos SICAV II - Triodos Renewables Europe Fund, the fund's predecessor. The above risk and reward category is not fixed and may shift over time. The lowest category does not mean a risk-free investment.

The following risks are essential to this fund and are not (sufficiently) represented in the indicator.

- Market risk and regulatory risk: To a considerable extent, the value of the investments in the fund's portfolio is determined by the global energy price trend as well as by the policies pursued by European and national governments with regard to the (sustainable) energy sector. Changes in subsidy schemes and other incentive measures may result in adjustments of the valuation of investments.
- Liquidity risk: Due to the illiquid nature of the investments, situations may occur in which there are insufficient funds to facilitate any requested redemption of shares. As a result, investors may be unable to sell shares in the fund

at the requested date. The fund aims to retain sufficient buffers in the form of cash or cash equivalents or arrange sufficient other guarantees.

- Project risk: The performance of the fund may fluctuate as the quantity of produced electricity is determined by variable factors like wind, rainfall and irradiation of sunlight. It also depends on the technical performance of installations such as wind turbines or solar panels. The fund invests in proven technologies with strong warranty and service packages. The fund invests in new (special purposes) enterprises that do not have a track record. The valuation of the fund's investments may be affected by the variations of the aforementioned factors.
- Valuation risk: As the fund invests in assets that are not traded on a regulated market, its investments may not have readily available prices. The fund employs a consistent, transparent and appropriate valuation methodology. To the extent that this methodology relies on periodic market-based data such as the actual interest rate, actual energy prices and (expected) inflation or of peer group comparisons, the valuation of the fund's assets may fluctuate with the variations in such data.
- Financing risk: The fund can finance itself through loans. Loans involve interest costs, which can affect the fund's returns. The obligation to pay interest and repay the loan may cause liquidity risk. This means that investors may be unable to sell shares in the fund at the requested date and / or that the valuation of the fund's assets may be affected.

For a complete overview of the risks of the fund, we refer to the risk chapters in the prospectus of the fund.

Charges.

The charges are used to pay the costs of running the fund, including the costs of marketing and distributing the fund. These charges are included in the ongoing charges of the fund. These charges reduce the potential growth of your investment.
